Dear Graham,

I think we have significantly underestimated the size and impact the Project Union proposal will have on the Clean Air proposal and all the other Creyke Beck expansion projects.

The Project Union proposal is in it's design phase and is part of a multi billion pound , 1,500 mile hydrogen gas pipeline covering the whole of the British mainland. The East Coast pipeline stretches from Teeside, through East Yorkshire, across the Humber and down to the East Midlands. It wraps around Beverley and passes through the rural gaps between Bishop Burton, Walkington, Skidby and through to Cottingham and on to the Humber.

Open cut trenches 30-40 m wide will be excavated with heavy machinery to bury pipe segments 1.2m underground, with associated soil storage. Construction is planned for late 2020's with a go live date in early 2030's.

The pipeline is on almost exactly the same route as both the Dogger Bank D and the Clean Air cabling routes and passes through, or very close to, the Clean Air Solar Farm itself and Creyke Beck which is also undergoing extensive expansion.

A 'Statement of Common Ground' and a specific Cumulative Impact section is required for all developers as part of their Environmental Statement. East Riding Council is a statutory consultee and is also required to undertake a Cumulative Impact Risk Assessment.

In light of all of these inter connected, competing, and conflicting NSIP proposals, we need to understand how the East Riding Council plans to develop it's own focussed, strategic overview which can be both explained to local residents and pressed upon the Planning Directorate.

It is completely unacceptable for each NSIP proposal to be considered in isolation in it's own Pre-application phase as they are all so deeply entwined.

As local residents, surely we deserve an explanation as to how all of these proposals together will impact on our daily lives both during the Construction phase and on an ongoing basis.

I understand you are meeting the leader of the Council on Tuesday and I would like to send Anne Hadley a copy of this email in advance of that meeting. As you know, I submitted a detailed email describing this scenario to the Planning Department a few weeks ago and I

haven't received a full response as yet. So I would like to submit this email formally to Anne directly.

I hope you find this helpful and I look forward to hearing from you soon.

Regards,

David Hume
